

**AMENDMENTS TO THE SPECIFICATION**

Please replace the paragraph beginning at page 12, line 17, with the following amended paragraph:

In one embodiment of the invention, portions of messages containing semantic associations may be aggregated based upon one or more rules or aggregation policies. In one embodiment, portions of messages containing semantic associations are identified and aggregated as the messages are transmitted by the sender via e.g. selection of the send button ~~310306~~. Moreover, in one embodiment, the aggregated content can be searched to identify one or more previously generated semantic associations. In one embodiment, the search results may be aggregated to form one or more secondary electronic messages whether it is an email message, a text document, and so forth.
